Please note: The product development team of Mine.Tan.Body.Skin has put this manual together for product reference only. Our passion and number one goal is to create a picture perfect spray tan. For a list of registered training authorities within your area, contact your local TAFE or College or visit www.minespraytan.com.au.

MINE.TAN.BODY.SKIN

OUR DIFFERENCE

A PICTURE PERFECT FINISH. IT'S ALL #MINETAN.

MineTan's 1 Hour Tans are designed for the Picture Perfect Finish...

The party. The beach holiday. The 'feel good' sensation. The selfie.

This is why we love and want a tan....

At Mine.Tan.Body.Skin, our passion and number one goal is to create the Picture Perfect Tan. We are committed to continuously create innovative formulas that are the allure of a natural golden body.

All of this happens with a core set value to make the perfect tan without any harmful elements or chemicals. We take pride in delivering products of the highest results, purity and enriched with naturally derived ingredients.

Our range of spray tans are specifically formulated to deliver superior results, representing state of the art in the world of spray tanning:

- » A TAN THAT'S COMPOSED OF NATURALLY DERIVED INGREDIENTS USING ECO-CERT APPROVED INGREDIENTS
- » EXCLUSIVE FAST ACTING FORMULA FOR QUICK, DEEPER & DARKER RESULTS
- » INTENSE, EVEN AND NATURAL COLOUR FROM YOUR FIRST APPLICATION
- » MAKES THE SKIN IMMEDIATELY SMOOTH, VELVETY AND DELICATELY SOFT
- » A SKIN THERAPY TREATMENT, INCREASING THE SKIN'S HYDRATION & MOISTURE
- » CONTAINING A PROPRIETARY ODOUR INHIBITOR ELIMINATING THE FAKE TAN SMELL
- » NO PARABENS, MINERAL OILS, HARMFUL GLYCOLS OR SULPHATES

MINE.TAN.BODY.SKIN

1 HT FORMULA & QUAD BRONZING TECHNOLOGY

(1)^{bt} FORMULA

FAST TAN ACTIVES WITH QUAD BRONZING

MineTan's 1 Hour Tans deliver the fastest, darkest, longest lasting results available.

The 1(HT) Formula contains Fast Tanning Actives with Quad Bronzing Technology to speed up the tanning process. Naturally derived Eco-Cert Approved DHA Tanning Actives are combined with powerful anti-oxidants, including rich lavish oils, botanical fruit extracts and silky amino acids to help the tan develop faster, absorb deeper into the skin and create a dark natural colour that lasts longer. The combination of natural ingredients and nutrient botanicals provide multiple benefits for the skin including vitamins and antioxidants to boost the skin's glow.

Quad Bronzing Technology uses the widest range of blended bronzers from deep brown, violet and black, with a combination of natural botanicals from mulberry, caramel and liquorice to generate a colour that's natural. This combined with each range's key ingredient gives MineTan an edge on the competition.

So say goodbye to the days of sleeping in your tan and ruining your bed sheets. MineTan allows you to apply after work and hit the town that night with the confidence of a natural looking tan without the fake tan smell.

(1)^{bt} FORMULA
FAST TAN ACTIVES WITH QUAD BRONZING

ALL MINE.TAN PRODUCTS CONTAINS NO PARABENS, MINERAL OILS, ARTIFICIAL FRAGRANCES, HARMFUL GLYCOLS, SULPHATES & PETROCHEMICALS SUCH AS DEA OR TEA

Please Note: All of MineTan 1 Hour Tans can be left on longer than our recommended time periods without affecting the integrity of the results.

INGREDIENTS LIST

THE CHOICE OF NATURAL & ORGANIC INGREDIENTS

MineTan professional solutions are a 99% naturally derived formula, using ECO-CERT approved ingredients making it great for clients with sensitive skin or the conscious healthy consumer.

The combination of ECO-CERT ingredients and natural botanicals in MineTan professional solutions provide multiple benefits for the skin including vitamins and antioxidants to boost the skin's glow.

All MineTan products contain no Parabens, mineral oils, artificial fragrances, harmful glycols, sulphates and petrochemicals such as DEA or TEA.

INGREDIENTS IN MINE SPRAY TAN

Dihydroxyacetone (DHA) ^{**} MineTan professional solutions use ECO-CERT Approved DHA in all tanning products. Derived from sugar cane, DHA is a colourless sugar. It interacts with the proteins and amino acids in the outer layer of your skin to produce a golden brown colour (To better understand this - it's similar process to when sliced apples go brown when exposed to air).

Certified Organic Aloe Barbadensis or Aloe Vera ^{**} Extracted from the Aloe Vera plant, this natural ingredient helps to oxygenate the skin, aiding with cellular renewal. It is also used in solutions due to its soothing and moisturising properties, having a similar pH balance to the skin. Aloe Vera contains many vitamins including A, C, E, folic acid, choline, B1, B2, B3 (niacin), B6. Aloe Vera is also one of the few plants that contains vitamin B12.

Phenethyl Alcohol [^] An organic compound that is a natural aromatic alcohol with a floral odour. In nature, it is commonly found in fruits & flowers, such as roses, bananas, apples, oranges, lilies & hyacinths. It is used in cosmetics as a fragrance & deodorant.

Alcohol derived from Sugar Cane [^] The organic alcohol we use comes from sugarcane that's organically grown. Ripe sugarcane is cut by hand, and then fed through a grinder to extract the juice. The juice is left to ferment for 24 hours and then heated over a fire to distil the alcohol.

Multi-Vitamins & Rich Botanicals ^{**} All MineTan products contain naturally derived multi-vitamins A, C & E and rich botanicals. These include Witch-hazel, Rosemary, Sea Kelp, Liquorice and a wide variety of fruit extracts. Ingredients like Caramel, Mulberries and Black Walnuts are used to give a natural colour base to the Solution.

Rich Lavish Oils ^{**} MineTan professional solutions contain a complex blend of Rich Lavish oils including Argan oil, Rosehip oil, Manuka oil and Avocado Oil to moisturise and restore hydration to keep skin soft and supple.

Food Colour (FD&C) Good enough to eat, good enough for the skin. This is what gives MineTan products the boost in bronzer colour. Although it's man made, it is used in food and across most cosmetics - and not to mention all spray tans. Food colour is what gives spray tan its brown liquid colour - helping you spray more even and a great instant cosmetic bronzer. Blending a combination of food colours and natural ingredients like caramel, gives MINE a unique deep bronze cosmetic bronzers.

Aqua [^] Around 80% of MineTan professional solutions is Water. Water is obviously one of the most natural ingredients in the world.

*** ECO-CERT APPROVED INGREDIENT**
^ NATURALLY DERIVED INGREDIENT

BACK TO BASICS

THE STRUCTURE OF THE SKIN

The skin consists of three layers.

The **epidermis** forms the outermost protective covering of the body.

The **dermis** lies beneath the epidermis and contains all the main material which supports, all the other structures.

The **subcutis (subcutaneous)** layer lies beneath the dermis and is made up of fatty tissue which cushions the internal organs against shocks and acts as an insulator and source of energy when required. This fatty layer separates the skin from underlying muscles.

EPIDERMIS

DERMIS

SUBCUTIS

COMMON SKIN TERMINOLOGY

MELANIN The cells that form the melanin pigment are called melanocytes and they can be found in the stratum germinativum. UV rays stimulate melanocyte cells in the basal layer of the epidermis to produce melanin, a substance which produces darkening of the skin to protect the underlying structures. Melanin is the primary determinant of skin colour. There are two types of melanin: Pheomelanin which is yellow coloured, and Eumelanin which is black. It is the proportion and size of these pigments which gives the wide range of skin colour. Self tanning products do not have any effect on the production of melanin.

KERATIN Keratin is a water-soluble fibrous protein found in the epidermis and is the main constituent of hair and nails. These proteins generally contain large quantities of the sulphur-containing amino acids, particularly cysteine. Keratin contributes to the waterproofing of skin.

VITAMIN D Vitamin D is essential for the formation and maintenance of bone. Vitamin D production is stimulated by UV light which converts 7-dehydro-cholesterol in the sebum to vitamin D. This circulates in the blood and any excess is stored in the liver.

SEBUM Sebum is produced by the Sebaceous Glands in the dermis and are made up of fatty substances and the remnants of dead cells. Sebum is a natural lubricant of the skin that helps to keep the skin supple. It also keeps the surface cells compacted and obstructs the passage of substances through the skin, provides a greasy coating which helps to insulate the skin and prevent natural moisture loss. Sebum also helps to block the mouths of hair follicles so that bacteria cannot enter. It is regarded as being waterproof; however it delays the penetration of water and aqueous solutions through the stratum corneum.

pH The measure of the acidity or basicity of the skin that helps ward off the advances of harmful bacteria and fungi. High pH can cause the dreaded "orange" effect in sunless tanning.

ACID MANTLE Sweat and sebum form the acid mantle which lines the surface of the skin. The normal skin pH is between 4.5 to 6.0, making it acidic. The acid mantle is a very fine, slightly acidic film acting as a barrier to bacteria, viruses and other potential contaminants that might penetrate the skin. These contaminants and other chemicals are primarily alkaline in nature and the skin's moderate acidity helps to neutralise their chemical effects.

WHERE THE MAGIC HAPPENS : THE EPIDERMIS

The epidermis is the upper layer of the skin; the most superficial layer. The epidermis is made up of layered scales. An organised rotational production line converts living cells at the base of the epidermis into dead, hardened, compacted layers of protein (keratin) on the outer surface, taking approximately 200 days for a cell to mature in the epidermis. The life time of a mature cell is between 7-20 days and the replacement time for the stratum corneum (top layer) between 32-36 days.

Every day millions of dead skin cells are sloughed off or worn away from the surface of the skin. This is why tans from self-tanning lotions will gradually fade; as the dead cells are worn away, so is your tan. For this reason, most of these products suggest that you reapply the tanning product approximately every three days to maintain your tan.

STRUCTURE

The epidermis consists of 5 layers:

1. STRATUM CORNEUM Also known as surface/horny layer. Outer most layer consisting of flattened dead skin cells. It is this layer that is affected by self-tanning products.

2. STRATUM LUCIDUM Also known as translucent layer. Lies directly underneath the corneum, but not present all the time. Tends to be a translucent layer found in areas that require more thickness or suffer more friction.

3. STRATUM GRANULOSUM Also known as granular layer. Lies underneath the Lucidum. Skin cells breakdown in this layer and keratin is impregnated into the cells. There is a process known as keratinisation whereby cells begin to lose their structure and eventually die.

4. STRATUM SPINOSUM Also known as prickle cell layer. Lies under the Granulosum and is a living layer of the epidermis which is made up of nucleated cells from the stratum germinativum. This layer rapidly divides as keratin is pushed into them making their cells tough and waterproof.

5. STRATUM GERMINATIVUM Also known as the basal layer. This is a living layer that receives its blood supply from the dermis. It produces new cells which reproduce by mitosis (each cell divides into two), which are pushed up through the overlying layers of the epidermis where they eventually lose their nuclei and die, which aids in continually repairing the skin. Melanocytes (pigment producing cells) are found in this layer.

1. STRATUM CORNEUM

2. STRATUM LUCIDUM

3. STRATUM GRANULOSUM

4. STRATUM SPINOSUM

5. STRATUM GERMINATIVUM

DERMIS

SPRAY TAN & DHA

THE HISTORY OF 'FAKE TAN'

Fashion and tanning have a long rich history and heritage. Coco Chanel was a fashion innovator with the iconic Chanel suit and little black dress but also gave birth to a new trend in the form of tanning. In 1923, when Coco arrived back from Paris from a cruise in Cannes with a deep tan it became a new symbol, which signified health, wealth and decadent subversive style.

Time passed, and in the fifties saw the very first bikinis, and the "all over" tan became even more popular. Women all over the world 'baked' in the sun to get the all over bronzed look.

In 1957, the tanning properties of DHA were discovered in a children's hospital. DHA was first used as an active ingredient during research on the treatment of diabetics, some of whom tolerated DHA better than glucose. DHA was also administered orally as a treatment of a childhood glycogen-storage disease. When doctors noticed that when children spill the DHA mixture on their skin, brown coloured spots would appear. One of the female doctors experimented by rubbing the mixture on her skin, and discovered 'the browning action' of fake tan.

The 1960's brought the introduction of the first 'Fake Tan'. Used with or without the sun, when it was introduced to the market, the "orange" effect caused by the first products left a negative effect on the market. Since then, DHA's physiochemical properties, tanning mechanics and skin tolerance have been explored, resulting in an improved method of application, a more natural looking tan, making orange body's generally a thing of the past. Present day production of DHA still relies on fermentation, as it did in the late 1800's.

Recent years where the effects of the sun have proven to be damaging to the skin, Sunless, Fake Tan, Self Tan and Spray Tanning products have exploded as the safest alternative to achieve an all over bronze tan.

DHA IN RECENT MEDIA

In recent media news, several questions have been asked by the media with the over-all safety concerns with spray tanning and the use of DHA.

The most current and informative scientific study available to the tanning industry on spray tanning was performed by the European Commission's Safety Commission on Consumer Safety (EC SCCS). This concluded that Spray Tan was indeed safe - although should not be heavily inhaled or ingested.

The FDA has also set out recommendations, not mandates, that Mine fully supports and endorses. When spraying DHA tanning solutions, either by handheld system or through automatic spray booths, the following precautions are suggested:

- Use of Protective Undergarments
- Use of Nose Filters
- Use of Protective Eye Shields
- Use of Lip Balm

Additionally, although not required by the FDA, as with exposure to all airborne particulates (mist), Mine recommends the use of disposable filtering masks for all sunless technicians during spray sessions, along with their standard over spray filtering equipment.

SPRAY TAN & DHA

HOW DOES IT WORK?

Spray tanning involves applying an active ingredient, dihydroxyacetone, or DHA, to your skin using a specialist low pressure spraying machine.

DHA is a sunless tanning agent and is the most popular way of achieving a natural looking tan without being exposed to the harmful UV rays of the Sun and is approved by the FDA for sunless tanning. DHA is a simple carbohydrate which is often derived from plant sources such as sugar cane, also known as fructose, which is then taken through a series of untraceable synthetic processing. It causes a non-toxic chemical reaction with the amino acid groups, which are part of the keratin protein present in the outer most layers of the skin.

Various amino acids react differently to DHA, producing different tones of colouration from yellow to brown. The resulting pigments are called melanoids. These are similar in colouration to melanin, the natural brown substance found in the deeper skin layers after UV exposure, which leads to a delayed development of a natural tan.

The depth of the tan will depend on the % strength of the DHA contained within the product. Overall depth and intensity of tan achieved will also depend on the consumers own natural melanin content and thickness of the skins stratum corneum. Where the stratum corneum is thicker, elbows, knees for example the reaction and tan is more intense, where the layer is thin, the face for example the tan is less intense. In order to achieve a uniform result you must remove loose scales from the skin before applying DHA.

The artificial tan immediately appears on the skin surface and will continue to darken over 24 hours depending on the formulation. Once the darkening effect has occurred, the tan becomes waterproof and will not wash away with soap or water. It will fade gradually over 5 to 10 days, in conjunction with the skins normal exfoliation process. Exfoliation, prolonged water submersion, or heavy perspiration can lighten the tan, as these all contribute to rapid dead skin cell exfoliation.

Another important factor in achieving a fake tan is the pH levels of the skin and formulation. An alkaline pH causes the tan to look orange, whereas a slightly acidic pH reduces this colour problem. A surplus of water in any formulation can hinder the tanning reaction; there is optimum water content for each of the formulation and skin required to achieve best results. A balanced formulation understands the importance of maintaining moisture in the skin, the correct pH balance and the odour reaction of protein and DHA. Every Mine product is scientifically proven to work with all of the above mentioned factors, developing a deeper, longer lasting and odourless tanning result.

Refer to each Mine Product for developing and washing times. Some people expect a spray tan to provide UV protection. However, unlike the melanin pigments, the DHA-derived polymers do not absorb significant amount of UV light, and therefore, cannot protect against UVB radiation.

ACHIEVING THE BEST RESULTS

GIVE YOUR CLIENTS THE FIRST CLASS EXPERIENCE

Using your spray tan machine to apply an even tan is just the first of many important steps! They may seem obvious, but with these tips, your salon or mobile business can become one of the best spray tanning businesses around.

The increased demand for spray tans has led to huge opportunities for salon owners and spray tan technicians. Most tanning technicians are well versed in the application process but there are always new tips and tricks to be learnt. The key to a successful spray tan business is not only delivering premium tanning results, but also providing a pleasant tanning experience. Here are some techniques and tips to help you become a true tanning pro.

MAKE THE EXPERIENCE FOR YOUR CLIENT AS COMFORTABLE AS POSSIBLE

Making the spray tanning experience as pleasant as possible will increase the likelihood of clients returning. The most important factor is to maintain a clean room, including the spray tan machine! It can also help to monitor the temperature of your tanning rooms, remembering that the clients will have to undress for the appointment.

Lastly, some friendly, casual conversation is a great way to make your clients comfortable.

PREPARE YOUR CLIENT'S SKIN

Blending Cream can be your lifesaver! When your client arrives, it is important to apply moisturising lotion, a barrier cream or blending cream to their elbows, knees, ankles and palms. These areas tend to absorb the spray tanning solution more readily, so a barrier or blending cream can help to avoid them turning too dark.

PREPARE YOUR CLIENTS STANCE

Standing still is critical in order for the tan to be applied evenly. There are a couple of ways you can help your client to remain steady during their application. Firstly, prepare the client for a spray tan. This includes applying barrier cream and stick on soles. Secondly, it is always a good idea to instruct your client about what to expect.

Let them know that the spray tan machine will produce a cold spray, as this will help prepare them to avoid flinching once you begin.

BE CAREFUL WITH THEIR FACE!

The face can be a tricky region to tan. It can also be the area that makes clients most nervous.

Firstly, never spray their face first as it can startle your client. Instead ease them into the process by spray tanning other areas first. Secondly, ensure that their hair is tightly tucked under a shower cap, especially if they have blonde hair. This helps avoid their hair from soaking up the colour and the smell from the spray tan solution.

Lastly, ask your client to hold their breath while the spray tan machine is focused on their face.

DRYING THEIR TAN AND PREPARING THEM FOR HOME

Ensuring that your client's tan is touch dry before they get dressed is critical.

Providing a fan or drying them with the spray tan machine hose is the best way to speed up this process. However, either way you should give them a couple of minutes to let their tan set after turning off the spray tan machine and getting dressed. Preparing your clients for when they leave the salon is another way to ensure that your client receives optimal results and client satisfaction.

Inform them when to wash and how to maintain their tan. Up-sell some retail for added benefits!

ACHIEVING THE BEST RESULTS

PREPARE CLIENTS FOR THEIR APPOINTMENT

Tell your clients preparation is key to the perfect spray Tan. We have put together a helpful checklist to tell your clients on how to prepare and maintain a professional spray tan.

MineTan Professional Solutions have been designed specifically for technician's applications with all equipment types. We are unmatched in customer satisfaction with the speed and colour results of our products.

GIVE CLIENT ADVICE; BEFORE AND AFTER CHECKLIST FOR A PICTURE PERFECT SPRAY TAN

BEFORE THE TAN

Exfoliate and moisturise 24 hours before your treatment, paying particular attention to elbows, knees, ankles and problem dry areas.

Paint nails and toenails, especially if artificial.

Wax/shave at least 48 hours prior to treatment. This allows the pores time to close. Dotting in pores may appear if not adhered to.

The entire 24 hours before your treatment avoid using bar soaps, high pH shower products or in shower moisturisers.

Please don't apply moisturiser, perfume, deodorant or makeup on the day of your treatment.

If the skin is dry, use MineTan Perfect Start Primer, to balance pH levels in the skin and blending cream to block our unwanted tanning areas.

AFTER THE TAN

Wear dark loose clothing; tight clothing or underwear may cause marks. Wear flip-flops or loose fitting shoes.

Shower lightly in cold - luke warm water for 30 seconds ONLY after the first hour for a light to medium tan.

Use plain water, don't use shower gels, scrubs, shampoos or loofer during the first 24 hours after your treatment.

Pat dry and use MineTan products after your first shower to extend the life of your tan and stay looking gorgeous.

Avoid sweating, don't exercise or swim for the first 24 hours after your spray tan treatment.

Try not to touch your skin during development time. Any marks on your hands, therefore, are due to your hands touching the developing tan. You need to be aware that once this has developed, nothing will remove it from your palms.

Moisturise, moisturise and moisturise some more. Use MineTan's 3 in 1 Gradual Tan so your tan is continually being topped up and its life extended. Remember to wash your palms after.

After day 5, exfoliate with a soft body polish on a daily basis, to help your skin absorb even more moisturiser and keep it looking and feeling gorgeous.

Long exposure to water and sweating from exercise will fade your spray tan. Your outer cells will start to soak up water which dilutes the effect of the tan. The longer you are in water the lighter your tan will get.

QUESTIONS & MAINTENANCE FOR CLIENTS USE
ACHIEVE THE PICTURE PERFECT FINISH' BROCHURE

ACHIEVING THE BEST RESULTS

THE USE OF SALON ESSENTIALS & ACCESSORIES

WHEN IT COMES TO PROFESSIONAL SPRAY TANNING, IT'S IMPORTANT THAT YOU HAVE ALL THE NECESSARY PROFESSIONAL ESSENTIALS AND ACCESSORIES FOR YOUR CLIENTS DURING THEIR TREATMENT.

DISPOSABLES

While clients want an envy-inducing tan, they most surely do not want their feet, hair or even their underwear to be brown and dirty-looking. To keep these areas clean throughout the application, ensure you provide them with disposables like sticky soles foot protectors, hair caps and underwear.

For clients who aren't comfortable being entirely naked, disposable underwear are also a great accessory, helping to save their own underwear and not to mention their modesty.

Nose Filters are also great to protect your Clients and Spray Tan Techs. Helping to prevent inhalation of airborne tanning solution or overspray.

PRE-TAN ASSIST PRODUCTS

Prepare your client's skin with MineTan's Pre Assist Professional Essential Products. Choose from the Perfect Start Primer to lower pH levels and add important moisture back to the skin to enhance spray tan results. If your client has dry skin, Perfect Start Primer is also the perfect choice to enhance the spray tan and provide a better result.

Blending Cream is highly recommended. When your client arrives, it is important to apply to their elbows, knees, ankles and palms. These areas tend to absorb the spray tanning solution more readily, so a barrier or blending cream can help to avoid them turning too dark.

AFTER CARE MARKETING & ADVICE

We understand the importance of marketing your business as much as ours, and offer a full range of promotional material to support your business. brochures are the ultimate technician resource and a great take home tool for your clients.

Remember to inform your client when to wash and how to maintain their new spray tan.

TAKE HOME RETAIL PRODUCTS

Once your client has received their spray tan, recommend some retail products to extend the life of their tan. MineTan have a full range of perfect match tanning products for the Face & Body.

MineTan's 3 in 1 Gradual Tan is a perfect retail upsell product to enhance the life of their tan over the next week.

You can also recommend a Perfect Match Bronzer, a natural looking bronzing powder, ideal for enhancing a skin tone or to strengthen their new tan.

ACHIEVING THE BEST RESULTS

QUALITY ASSURANCE

At Mine.Tan.Body.Skin we believe freshness is the key to the perfect spray tan, so we order weekly from the USA and bottle all of our spray tan products you will find in this catalogue, on-site in Australia. We formulate and manufacture our spray tan products in the USA. These products are formulated especially for Mine Tan Body Skin. We test our entire product for quality control when it arrives.

At Mine.Tan.Body.Skin, we don't mass produce, bottle, or stock months of inventory so product quality remains fresh and ready to use. The spray solutions our customers order are usually no more than 1-2 weeks old.

As the mercury rises, we adjust our shipping schedule on all solution shipments to protect your investment.

Why do we do this? To ensure that solution arrives to your doorstep at its peak efficacy, DHA is fragile, heat can cause DHA to activate, so the last place we want to have your product, is sitting in a hot truck or non-climate controlled warehouse over the weekend.

STORING YOUR SPRAY TAN

KEEP IT FRESH!

The solution should be stored in a cool, temperature controlled environment. Maintain a maximum temperature of 24-30 degrees Celsius for long-term storage. Repeated or prolonged storage at high temperature will destroy the products tanning effectiveness. Refrigerating the solution after it has been opened is recommended. Technicians who intend to travel with their product should take along as little product as possible and never leave them in a hot car. We suggest transporting them in a commercial cooler to maximise effectiveness.

EXPOSURE TO SUNLIGHT

Due to the natural properties of the raw material in MineTan Professional Solutions, DO NOT store it in direct sunlight. The solution will NOT spoil from incidental exposure, however repeated or prolonged exposure will reduce the products effectiveness.

CONTACT TO METAL

The ingredients that make our solution highly reactive to elements in the skin, making it an effective tanning agent, also make it reactive to contact with metallic objects. Never pour the solution through a metal funnel, stir with a metal spoon, or store in metal containers. Doing so will dramatically reduce the tanning effect of the solution. Only stainless steel is safe for direct contact with the solution. Components of spray on systems are built from stainless steel and will not affect its performance.

TECHNICIAN TIPS

HOW TO SPRAY TAN

BACK OF BODY

EXPERT TIP: When spraying dry areas like elbows & knees; in a continuous motion, slightly move the gun away from the skin so solution does not build up in these areas.

EXPERT TIP: Hands are flat - so you don't spray the palms

TARGETS: BACK OF UPPER BODY, EACH ARM, UPPER & LOWER LEG

Standing with back facing, start with the left shoulder and work down in vertical strokes from the neck to the buttocks. Spray down the backs of the arms. Lastly work down both legs, sweeping off the ankles.

SIDE OF BODY

EXPERT TIP: Both arms are aligned with body so it does not get overspray

EXPERT TIP: The legs are in the 'lunge' position so you can easily spray the inner thigh.

TARGETS: SIDE OF UPPER BODY, INNER LEG AND OUTER LEG

Standing to the side with one arm raised spray under the arm and up the side of the body. Continue down the outside of the facing leg to the foot. Spray the inner thigh and down to the foot of other leg.

FOR THE PICTURE PERFECT FINISH

Before you commence your spray tan application, make sure that all settings on your machine are ready to go, and that the space required for the tan, is clean and set up.

Here is a simple way to start learning your MineTan technique.

OTHER SIDE OF BODY

TARGETS: OTHER SIDE OF UPPER BODY, INNER LEG AND OUTER LEG

Ask Client to turn and stand in the opposite direction. Standing to the side with one arm raised spray under the arm and up the side of the body. Continue down the outside of the facing leg to the foot. Spray the inner thigh and down to the foot of other leg.

FRONT OF BODY

TARGETS: STOMACH AND FRONT OF EACH LEG

Stand with feet apart and arms held away from the body. Start at the top of the leg and spray vertically down the front of each leg and over the foot.

Ask the client to raise their arms above their head. Starting at the hips, spray vertically upwards to below the bust and repeat horizontally across the stomach.

Lightly mist over the entire stomach once complete to depend colour.

TECHNICIAN TIPS

HOW TO SPRAY TAN

ARMS & HANDS - FRONT

TARGETS: FRONT OF EACH ARM

Start at the top of the arms working down each arm. Lightly spray the hands in sweeping motions.

ARMS - INSIDE

TARGETS: INSIDE OF EACH ARM

Turn arms so the inside is exposed. Start at the top of the arms working down each arm.

UPPER BODY

TARGETS: CHEST, BUST & NECK

Starting from the right shoulder, spray up the side of the neck releasing the trigger at the jawline.

Continue spraying over the decolletage in upwards strokes releasing the trigger at the jawline.

Spray over the decolletage in a 'W' pattern to deepen colour.

FACE

TARGETS: FRONT & SIDE OF FACE

Facing forward again, make sure that the client closes their eyes and mouth and work quickly across the facial area. Spray down the centre of the face in a 'W' position. Ask the client to turn their head left and right and spray each side of the face and neck.

TECHNICIAN TIPS

BLENDING SOLUTIONS FOR CUSTOM TONES

Mix up MineTan Professional Solutions to create custom tones for an individual blend for clients wishing to have their own tanning experience. All of MineTan solutions have different benefits, so why not mix them together and create your own 'Super Tan' blend. At MineTan, we always recommend using the same brand of solution as different brands use various ingredients that could react when mixed together. Here are some of our favourites from our team:

EXOTIC LIQUID GOLD VIOLET-BLACK WITH DARK MOROCCAN Shower in 1-2 Hours

An exotic combination of rich colour with maximum hydration that comes from the added benefits of Argan Oil and Rich Lavish Oils in both solutions. This creative cocktail blend will give you an exotic European tan with maximum skin hydration.

TOBLERONE DARK CHOCOLATE WITH DARK MOROCCAN Shower in 1-2 Hours

This cocktail blend provides a deep, honey-dipped glow with the added benefits of Argan Oil and Cocoa that promote anti-aging, skin firming and cell rejuvenation properties in one blend.

SUPER SLIM CHOCOLATE WITH ONYX Shower in 1-2 Hours

Delivers a deep rich matte dark chocolate finish while boasting rich antioxidant virtues including doubling the anti-aging and anti-cellulite benefits from each solution. Spray Tans can also disguise cellulite and stretchmarks, making you look and feel slimmer and sexier.

AFTER DINNER MINT BLACK WITH CHOCOLATE Shower in 1-2 Hours

This cocktail blend of Cocoa, tan extending Multi-Vitamins, Aloe Vera and Rich Lavish Oils provides a sweet chocolate glow for an instant picture perfect tan. The most natural looking tan with dark chocolate tones for sweet indulgence.

CLASSIC MOCHA DARK ASH-BLACK JNR WITH CHOCOLATE Shower in 1-2 Hours

Create the most natural looking dark chocolate tan with the added benefits of Cocoa and Brazil Nut to improve skin's hydration and complexion. Multi-Vitamins, and Rich Lavish Oils help even out the skin tone and develop into a natural dark tan.

AFRICAN HOT PUNCH VIOLET-ONYX WITH DARK-ASH ONYX Shower in 1 Hour

This fusion of MineTans darkest products gives you the darkest, richest colour yet. The richness of Violet Base mixed with the deep ash brown of Dark Ash Base create an intense rich tan like no other.

SUMMER SUNSET BLACK WITH VIOLET ONYX Shower in 1 Hour

For a natural olive tan inspired by the gorgeous European skin, this blend is ideal to counteract orange tones found in medium skin tones. Also great for people who want to try a Violet Base but still loves the classic blend of Green Base solutions.

CHERRY BOMB VIOLET-BLACK WITH VIOLET-ONYX Shower in 1 Hour

This fusion of MineTan Violet Bases gives you a custom shade for the in-betweeners. Not too light, not too dark, this blend is perfect for the lovers of Violet Base who just wants it a little lighter in the colder months.

TECHNICIAN TIPS

UNDERSTANDING COLOUR BASE TANS

Learn more about colour base tans with an explanation of levels and tones to help you get the perfect shade of 'brown' you want every time. Much like hair colour, colour base tans replicate different 'tones' of brown. To select your preferred MineTan product, you first need to choose your 'level' of colour and then the 'tone' or 'finish' you wish to achieve.

Colour base tans can be selected in two ways:

1. To achieve your desired skin finish by replicating different skin types from around the world.
2. Matching original skin tones to give them the most natural looking tan without the 'orange' look.

STEP 1: CHOOSING YOUR TONE (COLOUR BASE)

Tone or type of colour base refers to the "finish" of brown shade you wish to achieve. Brown Tones are normally categorized as warm, neutral or cool, and are usually part of the shade description (think terms like "rich brown" or "ash brown"). No matter what your level of colour, you can choose from a variety of tones to help you achieve your colour transformation.

HERE ARE TWO WAYS YOU CAN DETERMINE THE TONE (COLOUR BASE) YOU WISH TO ACHIEVE:

» SELECTING YOUR SKIN FINISHING RESULT

At MineTan we refer to these tones as replicating the most popular exotic skin types from around the world.

Dark Ash Base: The Alluring Brazilian Sun Leaves Skin finishing a cool, intense dark brown.

Violet Base: The Exotic Europeans Sun. Leaves Skin finishing a rich dark red - brown.

Green Base: The Original Tan. Leaves skin finishing a natural olive brown.

» MATCHING TO ORIGINAL SKIN TYPES USING THE COMPLEMENTARY COLOUR WHEEL.

If you still can't decide, we have put together a complementary skin type colour wheel. (See diagram pictured right)

Colour match natural skin types to their ideal colour base tan to counteract their natural pigment to give the most natural looking tan without the orange undertone.

STEP 2: CHOOSING YOUR LEVEL (OR DEPTH)

Level refers to the degree of lightness or darkness of a colour, generally by the amount of DHA and additional tanning actives within the tan. At MineTan we offer 3 of levels of spray tans; light (*Black Jnr - 12% DHA*), medium (*Black - 13% DHA*) and dark (*Onyx 14% DHA*) levels. While every spray tan brand has its own level numbering system, MineTan offer 3 levels of colour that develops in 1 Hour for your clients to choose from. Each depth of colours can be used on all skin types, determining the level of colour you want to achieve.

This is for reference only. All MineTan colour bases work on all skin types, and adjust to peoples natural skin types to achieve their ideal skin finish. This is only a guide for best results using colour therapy.

THE SKIN TONE COLOUR WHEEL

A colour wheel based on complementary colour base & skin tones.

TECHNICIAN TIPS

PRODUCT RECOMMENDATIONS

VERY PALE OR REDDY SKIN

We have selected the lighter shades of MineTan for very pale or reddy skin. If clients wish for a darker result, choose a shade like Black that is suited for all skin types and gives a natural deep bronze

Recommended MineTan Solutions:

- » BlackJnr
- » Violet-BlackJnr
- » DarkAsh-BlackJnr
- » Moroccan
- » Winter Coat
- » Absolute
- » Black
- » Violet-Black
- » DarkAsh-Black
- » Perfect Bride
- » Chocolate

PALE OR LIGHT SKIN TONE

Lighter shades are great for pale or light skin wanting a natural result. If clients wish for a darker result, choose a darker shade, like Black that is suited for all skin types and gives a deep bronze natural colour.

Recommended MineTan Solutions:

- » BlackJnr
- » Violet-BlackJnr
- » DarkAsh-BlackJnr
- » Moroccan
- » Winter Coat
- » Absolute
- » Black
- » Violet-Black
- » DarkAsh-Black
- » Perfect Bride
- » Chocolate

MEDIUM SKIN TONE

All products of MineTan can be used for medium skin tones. If clients wish for a lighter result, choose a lighter shade, for darker result, choose a darker shade, that develops into a deeper colour.

Recommended MineTan Solutions:

- » BlackJnr
- » Onyx
- » Violet-Black
- » DarkAsh-BlackJnr
- » DarkAsh-Onyx
- » Dark Moroccan
- » Winter Coat
- » Dark Chocolate
- » Black
- » Violet-BlackJnr
- » Violet-Onyx
- » DarkAsh-Black
- » Moroccan
- » Perfect Bride
- » Chocolate
- » Absolute

OLIVE OR DARK SKIN TONE

For olive or darker skin tones, we recommend the darker shades of MineTan. For a lighter shade choose the mid tans like Black. For darker result, choose a darker shade, like Onyx. If results are still not dark enough, leave on for a little longer.

Recommended MineTan Solutions:

- » Black
- » Violet-Black
- » DarkAsh-Black
- » Moroccan
- » Chocolate
- » Perfect Bride
- » Onyx
- » Violet-Onyx
- » DarkAsh-Onyx
- » Dark Moroccan
- » Dark Chocolate
- » Absolute

Like choosing your cosmetics for the perfect skin finish, MineTan Professional spray tan solutions can be tailored to your desired end result your client wishes to achieve.

Our colour base and speciality solutions adjust to peoples skin tones to deliver a deep dark natural colour. To make it easy for you to choose products for your client, we have selected products we recommend for each skin type for the ultimate Picture Perfect finish.

Please note: This is a guide only and what we recommend at MineTan for the best results. If a lighter skin tone wishes to use a darker shade like Onyx to get a deeper result, it will adjust to their natural skin tone and create a darker result without effecting the integrity of the results. All of Mine 1 Hour Tans can be left on longer than our recommended time periods without going orange or drying out the skin.

TECHNICIAN TIPS

COMMONLY ASKED QUESTIONS BY CLIENTS

HAVE THE RIGHT ANSWERS FOR THOSE COMMONLY ASKED QUESTIONS BY CLIENTS.

WHAT IS SPRAY TANNING? HOW DOES IT WORK?

Spray tanning involves applying an active ingredient, dihydroxyacetone, or DHA, to your skin using a specialist low pressure spraying machine. DHA is a colourless sugar. It interacts with the proteins and amino acids in the outer layer of your skin to produce a golden brown colour.

Most spray tans contain an instant cosmetic bronzer that gives you a colour guide and instant colour when you are first sprayed. These instant cosmetic bronzers will wash away after your first shower and have no impact on the end result for your tan. It's not the amount of cosmetic bronzers that make the individual solutions darker from one another, it's the amount of DHA in the solution that creates varying results.

The spray tan will contain various amounts of DHA depending on the solution you choose. The DHA starts to activate immediately, 60% of this process is complete after the first hour yet the actual tan will continue to develop over the next 24 hours. All the cosmetic instant bronzers will wash off when showering. Your therapist will tell you how long to wait until you can bathe or shower depending on your skin colour and how dark you want your tan. The longer you leave it on, will result in a deeper darker tan.

WHAT MAKES MINETAN PRODUCTS SO GREAT?

Therapists and specialists have tested and used MineTan products over the past 10 years. Our tanning solutions are fragrance free and you can feel like you are actually soaking up the rays, drinking a pool side cocktail. As well as active salon quality DHA, MineTan retail products are enriched with aloe-vera, and other high quality natural ingredients to actively moisturise and nourish your skin.

IS IT SAFE?

YES. It is MUCH safer than exposing your skin to the sun's rays, and you still get that great tanned look. DHA has been approved by the FDA for use in the personal care industry for over 30 years. No adverse affects have been

reported other than minor skin irritations on allergic people. Allergic reactions are extremely rare and if you have experienced allergic reactions to self-tanning or other beauty products please arrange a skin patch test first with your therapist. We do recommend however, to be sprayed in a well ventilated area, or an area that includes a clean air/extraction unit.

HOW LONG DOES MY SPRAY TAN LAST?

Your spray tan will last approximately 5-10 days depending on your daily skin care regime and lifestyle. A spray tan fades just like a tan from the sun. As your skin sheds dead cells, your tan will fade. So the key is to moisturise with MineTan's 3 in 1 Gradual Tan, this perfect DHA-rich moisturiser will help maximise the life of your tan.

CAN YOU USE TAN OUTDOORS WITH A SPRAY TAN?

YES. You can, but you need to remember that spray tan, whilst it looks gorgeous, does not give you any protection from the sun's ultraviolet light. For outdoor tanning, we recommend using a sunscreen with an SPF of 30 or more. Remember that the sun dries your skin out, reducing the longevity of your spray tan.

Hint: Lots of people have a MineTan Professional Solutions before their beach holiday, so they can start off looking tanned and fabulous from day one!

WHAT DO I NEED TO PREPARE FOR MY TANNING SESSION?

To get the best results from your MineTan spray tan, you need to remove your dead skin cells by exfoliating 24 hours prior to your treatment. This means the DHA solution can get straight to work on new skin cells, and give you a longer lasting tan. Make-up and deodorant can also effect development and should be removed before tanning. Do not use moisturisers 24 hours prior to your treatment as they act as a barrier to the spray tan solution too and can cause uneven, streaky effects.

DO I HAVE TO GET NAKED?

NO. It's entirely up to you. If you don't want to get naked, we suggest you wear old dark underwear or a swimming suit/bikini that you don't mind staining. For men, boxers, swim trunks or shorts. Many therapists keep a range of disposable underwear available for you to use.

HOW DARK WILL I GET?

There are different strengths of DHA and your therapist will advise you of the best one for your skin tone, bearing in mind how dark you want to go. The darker you tan naturally, the darker you will tan with a spray tan. We recommend leaving your spray tan on for 1 - 4 hours before you lightly shower. Do not exceed more than 8 hours before your first shower.

WHAT SHOULD I WEAR AFTER MY TREATMENT?

Wear loose fitting, dark coloured clothing and flip-flops/ thongs as some of the bronzer can rub off on your clothing. Shoes can cause your feet to perspire, affecting the final results. Natural fibres like 100% cotton T-shirts are the best. Any colour that does rub off on your clothes can usually be washed out during a normal wash cycle. Bear in mind that any materials have the potential to stain.

WHAT ABOUT STREAKING AND/OR TURNING ORANGE?

Spray tanning has come a long way since the early days, better solutions, machines, training and spray tan technology virtually eliminates these issues.

Your trained MineTan therapist is experienced in producing streak free tans and will ensure that the right solution is chosen for your colouring. We have a selection of beautiful MineTan colours to choose from for a natural sun-kissed look and long-lasting results.

WHO SHOULD NOT GET A SPRAY TAN?

Anyone who is allergic to self-tan or who has breathing difficulties. If in doubt or if you have further questions, please speak to your therapist or consult your local doctor before your appointment. Although considered mostly safe in a well-ventilated area and wearing a face mask or nose plugs, it is recommended women who are pregnant should always consult their doctor if they want a spray tan.

WHAT WILL HAPPEN DURING MY TREATMENT?

On your very first tanning session, your therapist will ask you a number of questions and then fill in a consultation card for you. Then your therapist will give you a few minutes to get undressed (or change into your underwear if you choose) and remove jewellery. Next the MineTan Blending Cream will be applied to your hands and tops of your feet and any dry areas to prevent them from tanning too much. The full treatment will take around 10 minutes. For your spraying, you will be invited to stand in a tanning cubicle, to ensure the spray goes on your skin, not into the air.

Hint: To avoid issues it is important to pre-treat the skin with MineTan's Perfect Start Primer, a pH balance spray prior to the spray tan treatment to neutralise your skin. Lowering the skins pH balance results in deeper darker DHA result and combats the dreaded orange look.

During your treatment you will see a dark chocolate colour on your skin. This a colour guide consisting of instant cosmetic bronzers for your therapist to see whilst spraying. The tanning actives begin to work immediately after application. It will develop over the next few hours into a gorgeous spray tan. These instant bronzers are only temporary and will wash off during your initial shower. This is not necessarily the colour you will be after the full developing time of 24 hours.

Your first shower should be a warm water rinse only, do not use soap or hot water during your first shower. After your first QUICK rinse, you should know that the tanning actives continue to work within the skin and deepen in time replacing the cosmetic bronzers as they washed away during the first shower. Please note that everyone's skin is very different and the personal pH balance of your skin will effect the end colour results. If you are concerned about the difference in colour that you see during your session, apply a tanning sticker or a piece of clothing (eg. Disposable underwear) that will leave a tan line after the treatment. This gives you the ability to visually see the results once sprayed. It is not uncommon for you to feel disappointed after the first shower as you see the cosmetic bronzer wash away, however if you have used a tanning sticker or are left with a tan line from a piece of clothing, you have an amazing point of reference to your original skin tone.

MINE.TAN.BODY.SKIN

1 HOUR SPRAY TANS

LOVE THE **COLOUR**.
LOVE THE **COMPLIMENTS**.
LOVE THE **PICTURE PERFECT FINISH**.

**FAST ACTING 1 HOUR TANS
FOR EVERY SKIN TONE**

Wash 'n' Wear within the hour. Achieve your desired colour by showering in 1 hour for a light to medium tan, 2 hours for a medium to dark tan. Our fast tanning actives begin to work immediately upon application.

Guide cosmetic bronzers will wash away during your first warm water rinse, while fast tanning actives continue to work within the skin and deepen in time replacing the cosmetic bronzers as they washed away during the first shower. Client results should last 5-10 days without patchiness.

MINE.TAN.BODY.SKIN

COLOUR BASE 1 HOUR TANS

Like choosing your cosmetics for the perfect skin finish, spray tan solutions can be tailored to enhance the end result of the spray tan. We can now replicate all the exotic skin types from around the world using different colour bases.

Colour base solutions adjust to peoples skin tones to deliver a deep dark natural colour. MineTan's 1(HT) formula containing fast tanning actives with Quad Bronzing Technology uses the widest range of blended bronzers from violet, deep brown, black Japanese charcoals and caramel to generate a colour inspired by your favourite region.

This combined with key moisturising benefits of Aloe Vera, Vitamin A, C & E, Rich Lavish Oils, and Natural Botanicals enhance colour while different levels of DHA control colour depth. MineTan's 1 Hour Tan range delivers the fastest, darkest, longest lasting result available.

GREEN BASE TANS

MINETANS ORIGINAL FAST ACTING 1 HOUR TANS WITH QUAD BRONZING TECHNOLOGY.

A Green Base Tan is a mix of brown bronzers for an olive, natural bronze finish. MineTan's 1 Hour Tans deliver the fastest, darkest, longest lasting results available. The 1(HT) formula contains Fast Tanning Actives with Quad Bronzing Technology to speed up the tanning process.

ECO-CERT® Approved DHA Tanning Actives is combined with powerful anti-oxidants, including rich lavish oils, botanical fruit extracts and silky amino acids to help the tan develop faster and create a deep dark natural colour that lasts longer.

VIOLET BASE TANS

DEEP RICH COLOUR THAT REPLICATES THE EXOTIC EUROPEAN SUN

Violet hues give you the depth of colour, inspired by gorgeous European skin. It's simply a combination of violet and brown bronzers, mixed with a combination of natural

botanicals of caramel, mulberry, beetroot and blueberries that give you a deep rich colour that captures olive skin tones of a European beach holiday - all in just 1 Hour.

DARK-ASH BASE TANS

INTENSE DEEP COLOUR THAT REPLICATES THE ALLURING BRAZILIAN SUN

Inspired by a Brazilian Beauty, skin is transformed into an intense deep dark colour just like you've been transported to the amazing party that is 'Carnivalé'. Containing BinchoTan, (a purifying black japanese mineral bronzer), and dark brown bronzers with a

combination of natural botanicals including Brazil nut, liquorice and black walnut, skin is left finishing an ultra dark ebony complexion that has an intense dark colour like no other tan on the market - all in just 1 Hour.

ABSOLUTE

VIOLET-BLACK *jnr*

(1)^{ht} HOUR

WASH n WEAR TAN

SUITABLE FOR LIGHT - MEDIUM SKIN TYPES

RAPID RESULTS VIOLET BASE 1 HOUR TAN - 12% DHA

Suitable for clients with a lighter skin tone, Violet-Black Jnr develops as an exotic European sun kissed, natural tan with all the added benefits of multi-vitamins, natural botanicals and rich lavish oils to create exotic rich bronzed tones.

LEVEL (OR DEPTH)

VIOLET BLACK <i>jnr</i>	12%DHA	VIOLET BLACK	13%DHA	VIOLET ONYX	14%DHA
-------------------------	--------	--------------	--------	-------------	--------

RESULTS

RAPID, LONG LASTING, STREAK FREE, FAST DRYING, ODOURLESS RESULTS

Our fast tanning actives begin to work immediately after application. Guide cosmetic bronzers will wash away during your first warm water rinse, while tanning actives continue to work within the skin and deepen in time replacing the cosmetic bronzers as they washed away during the first shower.

Client results should last 5-10 days without patchiness.

HOW TO USE

DIRECTIONS

Wash 'n' Wear within the hour. Achieve your desired colour by showering in 1 hour for a light to medium tan, 2 hours for a medium to dark tan. Warm water rinse only, do not use soap or hot water during your first shower.

Note: This product is intended for professional use only and is designed for use in all spray tanning systems regardless of manufacturer. Technicians are encouraged to wear gloves and filtering mask during application.

We recommend using only 50ml's per individual treatment, 20 applications per litre. If you dare double coats we recommend using only 85ml.

FORMULATED FOR SALON PROFESSIONAL USE

INGREDIENTS

Purified Water (Aqua), Aloe Barbadensis (Aloe Vera) leaf extract*, Dihydroxyacetone (DHA)*, Hamamelis Virginiana (Witch Hazel) Distillate Pure, Caramel[^] (Natural Colour), Alcohol[^] (Derived from Sugar Cane), Glycerine[^] (Vegetable Derived), Tocopherol Acetate[^] (Vitamin E) Retinol Palmitate[^] (Vitamin A), L-ascorbic acid[^] (Vitamin C), Oleoresin Rosmarinus Officinalis (Rosemary) Leaf Extract[^], Argania spinosa (Argan) oil*, Leptospermum Scoparium (Manuka) oil[^], Persea Gratissima (Avocado) Oil[^], Rosmarinus Officinalis (Rosehip) oil[^], Phenethyl Alcohol[^] (Fruit Derived), Tomato Seed Extract[^] (Vitamin C), Beta Vulgaris (Beet) Root Extract[^], Morus alba root (Mulberry) extract[^], Vaccinium Angustifolium (Blueberry) Fruit Extract[^], FD&C Blue 1 (C142090), FD&C Yellow 5 (C119140), FD&C Red 40 (C16035), D&C Green 5 (C161570) and Natural Essential Oils[^] as Fragrance (Parfum).

SPECIALTY SPRAY TANS

LOVE THE **COLOUR.**
LOVE THE **COMPLIMENTS.**
LOVE THE **PICTURE PERFECT FINISH.**

**SPECIALTY SPRAY TANS FOR EVERY
PICTURE PERFECT EVENT.**

MineTan is the only beauty and tanning company in the world designing products with such cutting edge creativity and allure of that natural golden body no matter the occasion.

For every picture perfect event, MineTan's specialty tans are designed to deliver the perfect spray tan every time.

So whatever the event, skin type or gender, MineTan has you covered.

Our infamous Perfect Bride with its low transition bronzers keeps that precious white dress white, and gives you that perfect glow for your special day.

The Moroccan range is a powerful formula enriched with Argan Oil to tame the driest of skins.

The Chocolate Range delivers a rich matte dark chocolate finish, blended with Cocoa it nourishes, hydrates and protects the skin and boasts many rich antioxidant virtues including anti-aging, anti-cellulite and relaxing benefits.

Winter Coat is perfect for those winter months where you still want a tan, but your regular solution is a bit too dark.

Our Man Tan for the modern metro sexual, with low cosmetic bronzer so his mates won't even know. Refer to each product for directions on how to use and developing times.

MINE.TAN.BODY.SKIN

SALON ESSENTIALS

Don't ever go without the basics to ensure picture perfect results every time, avoid the risks of orange feet and palms, the effects of dry skin and if needed practice makes perfect with our Play Training Solution.

Deliver only the finest results with the key support products every salon should have only finger tips away.

PERFECT START PRIMER

SUITABLE FOR ALL SKIN TYPES

PREPARE SKIN FOR THE PERFECT SPRAY TAN

MineTan's Perfect Start Primer gently cleanses the skin for optimum, long-lasting DHA results. The Fruit Prime Extract helps to adjust the skin's pH level to enhance the DHA reaction. Lower pH levels result in a deeper, more realistic, natural looking tan.

Perfect Start Primer is also designed to add additional moisture to the skin to combat the drying effects of DHA.

Increases your advantage revenue by \$5 per spray.
Delivers 50 treatments per litre.

RESULTS

PRE TAN ASSIST

Prepares client's skin as it lowers pH level and adds important moisture back to the skin, enhancing spray tanning results.

If your client has dry skin, Perfect Start Primer is the perfect choice to enhance the spray tan and provide a better result.

HOW TO USE

DIRECTIONS

To be used just before spray tanning session. Spray lightly over entire area that is to be tanned and gently rub into skin with hands or damp towelette. Proceed with the application of the spray tan product of your choice. Use between sessions to help maintain colour.

Note: This product is intended for professional use only and is designed for use in all spray tanning systems regardless of manufacturer. Technicians are encouraged to wear gloves and filtering mask during application.

We recommend using only 20ml's per individual treatment, 50 applications per litre.

FORMULATED FOR SALON PROFESSIONAL USE

INGREDIENTS

Purified Deionized Water, Purified Aloe Vera Gel 40x, Fruit Prime Complex, Pro-Tanning Complex, RejuvenOX, Grapefruit Oil, Aquaxul, AstraCran, Citric Acid, FD&C Yellow #4, Polysorbate 80, Fragrance, Phenethyl Alcohol & Caprylyl Glycol, Benzyl PCA.

BODY.SKIN 1 Litre MIA200804

BLENDING CREAM

SUITABLE FOR ALL SKIN TYPES

PROTECT HANDS AND FEET FROM UNWANTED SPRAY TAN

Specially designed to diminish or completely stop the development of tan on unwanted areas and traditionally difficult places to tan like your hands and feet.

This creates a beautiful blend between tanned and non-tanned areas.

RESULTS

PRE TAN ASSIST, PREPARE SKIN FOR THE PERFECT SPRAY TAN

Mine Blending Cream is specially designed to diminish or completely stop the development of tan on unwanted areas and those traditionally difficult places to tan like your hands and feet. Everyone's skin is different, and applying Blending Cream to dry or rough regions such as your hands, knees, elbows and feet is advisable. It's also recommended to apply Blending Cream generously to areas such as palms of your hands, fingernails, soles of your feet and toenails. The aim is to create a beautiful blend between tanned and non-tanned areas. No one ever tans the palm of the hand, fingers or toes, so lather up and protect those special areas to create a golden glow that no one knows is a fake one.

HOW TO USE

DIRECTIONS

Immediately prior to spray tan session, apply liberally to elbows, palms, soles of feet, cuticles, knuckles, areas between fingers and toes. Blend smoothly into surrounding skin for an even colour transition. Follow with spray tan immediately. Wipe excess cream away with a towel. Do not scrub.

Note: This product is intended for professional use only and is designed for use in all spray tanning systems regardless of manufacturer. Technicians are encouraged to wear gloves and filtering mask during application.

We recommend using only 5-10ml's per individual treatment, depending on areas that are covered.

FORMULATED FOR SALON PROFESSIONAL USE

INGREDIENTS

Ingredients: Deionized and Purified Water (Aqua), Aloe Barbadensis (Aloe) Leaf Extract, Sodium PCA, Glycol Stearate, Isopropyl Palmitate, Stearic Acid, Panthenol, Hydrogenated Vegetable Oil, Glyceryl Monostearate, PPG-12/SMDI Copolymer, Hydrolyzed Beta-Glucan, Hydrolyzed Cornstarch, Beta Vulgaris (Beet) Root Extract, Cetyl Acetate, Stearyl Acetate, Oleyl Acetate, Acetylated Lanolin Alcohols, Theobroma Cacao (Cocoa) Seed Butter, Retinol Palmitate (Vitamin A), Ascorbic Acid (Vitamin C), Tocopherol (Vitamin E), Lycopersicon Esculentum (Tomato) Extract (Vitamin C), Caprylic/Capric Triglyceride, Phenoxethanol, Caprylyl Glycol, Potassium Sorbate, Hexylene Glycol, Citric Acid and Polysorbate-80. BODY.SKIN 1 Litre MIA200806

PLAY TRAINING SOLUTION

SUITABLE FOR ALL SKIN TYPES

PRACTICE MAKES PERFECT

Play is an amazing product that allows you to practice for that perfect tan on the same model time and time again.

This product does not develop on the skin, so if you make a mistake, simply shower and start again. Practice makes perfect.

RESULTS

PRE TAN ASSIST

Play is an instant bronze solution with no DHA, so it does not develop on the skin - just washes away. Perfect for a training solution to practice the perfect spray tan. The fast drying low transition bronzer can also be used as an instant bronzer for any picture perfect event and will wash off with soap and water.

HOW TO USE

DIRECTIONS

This product is intended for professional use only and is designed for use in all spray tanning systems regardless of manufacturer. Technicians are encouraged to wear gloves and filtering mask during application.

We recommend using only 50ml's per individual treatment, 10 applications per bottle.

FORMULATED FOR SALON PROFESSIONAL USE

INGREDIENTS

EXOTIC DARK BRONZERS, INSTANT COLOUR WITH ALOE VERA + GREEN TEA

Suitable for all skin types, Black Lotion is the original fast acting 1 Hour Express Tan with Quad Bronzing Technology. This easy to apply, streak free and self adjusting formula, enhanced with active ingredients including tan extending multi-vitamins, ensures a deep bronze tan every time. The exotic Dark bronzer provides an instant perfect tan that continues to develop into a deep dark natural colour without the fake tan smell.

RESULTS

ACHIEVE YOUR PICTURE PERFECT TAN.
CHOOSE HOW DARK YOU WANT TO GO:

SHOWERS IN 1 HOUR	SHOWERS IN 2 HOURS	SHOWERS IN 3 HOURS +
----------------------	-----------------------	-------------------------

Shower in 1 Hour for a natural result.
Leave on longer as desired, for deeper darker colour.

A Green Base Tan is a mix of brown bronzers for an olive, natural bronze finish. The express tanning agent will begin to activate immediately upon application, this will replace any temporary bronzers as they wash off in the first shower. Your tan will continue to develop and deepen in colour over the next 24 hours. Regular showering may be taken 16-24 hours after application.

HOW TO USE

DIRECTIONS

For an even, streak-free tan, apply to clean, exfoliated skin in a well ventilated area. Allow at least a few minutes before contact to clothes. Use sparingly on elbows, hands, knees and feet. Wash hands immediately with soap and water after each use.

CHOOSE HOW DARK YOU WANT TO GO. Rinse with WARM WATER ONLY for 60 seconds. Do not use soap or scrubs and do not rub or scrub freshly tanned skin. By showering 1 hour after application, you will achieve a light to medium tan. By showering 2 hours after application, you will achieve a medium - dark tan. For a deeper darker colour, you can leave for 3 hours and beyond. It is best to wait 8 hours or longer between applications.

We recommend using MineTan's Bronze On Mitt and using only 40ml per full body tan. You should achieve 4-6 tans per bottle. If you dare double coats we recommend using only 60ml.

INGREDIENTS

Aloe Barbadosensis Leaf Juice in Deionized and Purified Water, Dihydroxyacetone (Eco-Cert® Approved DHA), Glycerin, Cetyl Alcohol, Sodium Acrylate/Sodium Acryloyldimethyl Taurate Copolymer, Glyceryl Stearate, Isopropyl Palmitate, Musa Sapientum (Banana) Fruit Extract, Alpha Hydroxy Acids, Beta Hydroxy Acids, Salicylic Acid, Vaccinium Macrocarpan (Cranberry) Extract, PPG-12/SMDI Copolymer, Hydrolyzed Beta-Glucan, Hydrolyzed Cornstarch, Beta Vulgaris Root (Beet) Extract, Retinol Palmitate (Vit A), L-Ascorbic Acid (Vit C), Tocopherol (Vit E), Tomato Seed Extract (Vit C), Panthenol (Vit B5 Complex), Sodium PCA, Citric Acid, Ordanone (Parfum), Caprylic/Capric Triglyceride, Phenoxethanol, Caprylyl Glycol, Potassium Sorbate, Hexylene Glycol, Caffeine, Copper, and Natural Essential Oils as Fragrance (Parfum). THREE IN ONE GRADUAL TAN

SUITABLE FOR ALL SKIN TYPES

3 IN 1 LOTION : GRADUAL TAN, TAN EXTENDER & AFTER SUN CARE

DAILY MOISTURISER WITH A TOUCH OF TAN

A daily moisturiser with a touch of tan, MineTan 3 in 1 Gradual Tan builds or extends a luxurious golden tan. Perfect for all skin types and tones, it contains natural tanning agents, Shea Butter and Aloe Vera to produce superior, subtle colour. Use daily to reach the golden bliss you desire or to keep any tan fresh and glowing. Use as an after sun care product, to moisturise dry skin. Gentle enough for the most sensitive skin, facial quality.

RESULTS

HYDRATING SKIN REPLENISHMENT WITH A TOUCH OF COLOUR

Your skin will feel light and refreshed with the nourishment from Coconut Oil, Shea Butter and Aloe Vera, the easily absorbed tanning actives will develop in the coming days showing subtle hints of colour. Using everyday deepens the colour results and provides 24 hour moisturisation for soft smooth skin all day long.

HOW TO USE

DIRECTIONS
 For best results, apply to freshly cleansed skin with MineTan Bronze On Applicator Mitt. Smooth on evenly and blend thoroughly.

Use sparingly around knuckles, knees, ankles and elbows.

You will begin to see a gradual tan enhancement of colour within several days.

Note: Wash hands immediately with soap and water after application. It is best to wait 8 hours or longer between applications.
